

## Rhubarb Swiss Chard

*Beta vulgaris 'Rhubarb'*

Height: 24 inches

Spread: 24 inches

Sunlight:

Hardiness Zone: (annual)

Group/Class: Cicla Group

### Description:

Closely related to beets, this variety can be ornamental as well as culinary; rich, crinkled green leaves with red veins and stalks resemble rhubarb; a tasty addition to salads or vegetable dishes; abundant crops all season, into fall

### Edible Qualities

Rhubarb Swiss Chard is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. The entire above-ground parts of the plant are edible, and are usually harvested from early to late summer. The edible parts have a mild taste and a crisp texture.

The plant is most often used in the following ways:

- Fresh Eating
- Cooking

### Planting & Growing

Rhubarb Swiss Chard will grow to be about 24 inches tall at maturity, with a spread of 24 inches. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. Because of its relatively short time to maturity, it lends itself to a series of successive plantings each staggered by a week or two; this will prolong the effective harvest period.

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

## PLANT FINDER

Rhubarb Swiss Chard is a good choice for the edible garden, but it is also well-suited for use in outdoor pots and containers. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
