Description:

A naturally compact and mounding plant that produces a blizzard of snowy white flowers from early to late spring; tidy evergreen foliage for the rest of the year; benefits from snow cover; good for general garden use

Ornamental Features

Whistler White Candytuft is smothered in stunning clusters of white flowers at the ends of the stems from early to late spring. Its narrow leaves remain green in color throughout the year.

Landscape Attributes

Whistler White Candytuft is an herbaceous evergreen perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Whistler White Candytuft is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

PLANT FINDER

Planting & Growing

Whistler White Candytuft will grow to be only 4 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 10 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
